

Retractable rear lift handles to suit an RF3 and RF4. The handle assembly is manufactured from light alloy and fits into the 25mm diameter hole in the fuselage in front of the tailplane.

Very little increased weight when compared to the wooden handle normally fitted. Aircraft without an hole can be converted by drilling the hole from either side in the re enforced area of the fuselage. Plenty of examples around.

I have fitted two handles to date and plan to produce another batch for owners who would like the assembly. Price £199.

Currently 1 in stock or 4 weeks from receipt of orders for 3 or more assemblies. 078 9987537
